

Grease-X® Jet

Fast-acting emulsifier specially formulated for your jetting equipment to open blocked pipelines.

Fat, Oil and Grease Problems

FOG (fats, oils and grease) can be a real problem for municipal collections systems, businesses and homeowners. Contaminants such as fats, grease, soap scum and cellulose can stick to the pipe walls restricting the water flow to the point of causing a blockage, subsequent back-up and even a sewer spill. Now there is a treatment that offers a preventative maintenance solution that is reliable and easy to use.

The Grease-X® Jet Solution

The best way to handle FOG before it becomes a problem is to implement a preventative maintenance program using a biological digester like Grease-X® Biozyme microbial system. When it is not possible, FOG can be efficiently removed using Grease-X® Jet aqueous cleaner and degreaser. It works well on all types of food and petroleum origin fats, oils and grease. It is also ideal for cleaning jetting equipment after use in sewer lines.

PRODUCT DESCRIPTION:

GREASE-X® JET is a water-based, concentrated heavy-duty liquid cleaner, which penetrates, softens and emulsifies all forms of fats, oils and grease. It emulsifies them on contact with water. Grease-X® Jet contains biodegradable non-ionic surfactants, chelating agents and water. It additionally contains a biological catalyst to enzymatically break down grease.

Benefits of Grease-X® Jet Usage:

- Efficiently cleans all types of animal fats, vegetable oils, petroleum greases and heavy fats and oils from hard and porous surfaces.
- Non-corrosive, non-petroleum based and non-acidic.
- Safe for all types of pipes.
- Water based for ease of use and safer handling than solvent based cleaners.
- Coats pipe walls preventing grease from re-adhering and coagulating in the future.
