When fats, oils and grease clog municipal and residential wastewater systems, arm your crews with Grease-X®

The total package solution.

Grease-X® has the power to keep your municipal and residential wastewater systems clear of fats, oils and grease (FOG) using your own crew and equipment. The five Grease-X® formulas make a complete package to clear FOG-choked pipelines and eliminate pipeline odors in lift stations, treatment plants and grease traps.

Grease-X® Biozyme

Grease-X® Biozyme is a granular powder that uses nature's own microorganisms to digest FOG in your wastewater system and prevent future backups. Grease-X® Biozyme features highly concentrated microbes that coat pipelines and lift stations, reproducing and spreading throughout your system. Biozyme microbes also secrete enzymes that further digest FOG. Grease-X® Biozyme is all natural, non-caustic and non-polluting. Since Biozyme microbes eat grease rather than just break it into smaller pieces, it reduces the load on wastewater treatment plants.

Grease-X® Jet

Grease-X® Jet is a water-based, concentrated heavy-duty liquid emulsifier and cleaner, which penetrates, softens and emulsifies all forms of fats, oils and grease. When used with your jetting equipment, it quickly unblocks FOG-choked pipelines and immediately restores pipe flow capacity.

Grease-X® GT Pump

The Grease-X GT Pump is designed for a controlled time release of the Grease-X GT and Grease-X GT-10X liquid bacterial solutions in drain lines, grease traps and lift stations.

Grease-X® GT & Grease-X GT-10X

Grease-X® GT and GT-10X are multi-strain liquid bacterial solutions specifically formulated to degrade fats, oils, greases and other food waste in the demanding environments of drain lines, grease traps, grease interceptors and lift stations. The bacterial consortium present in these products produces lipase enzymes which target large oil and grease molecules, breaking them down into smaller molecules that are then metabolized by the bacteria to quickly degrade the fat and reduce the risk of blockages.

Grease-X® WWTP

Grease-X® WWTP offers an extremely effective solution for the constant challenge of suspended solids, BOD's, COD's, sludge, malodors, organic build-up and high levels of fats, oils and greases in wastewater treatment applications. The highly concentrated, optimized blend of application-specific bacteria has been selected for its ability to degrade common municipal and food processing waste and, in particular, high levels of FOG.

From the makers of RootX®

Grease-X® continues the RootX tradition of non-caustic, non-polluting pipeline maintenance products that are easy for municipal and residential crews to apply.
